i.get.it

The eLearning Standard for the MCAD/PDM Industry

Overview

i.get.it is your company's complete, Internet-based eLearning system. It provides your company with an immersive learning environment.

i.get.it contains measurable and customizable features, which help to manage company, department and individual training. In fact, i.get.it is the only vendor-neutral learning management system (LMS) for the MCAD/PDM industry, providing course materials for EDS PLM Solutions' and Dassault Systemes' products, including SolidWorks, Unigraphics, CATIA and Teamcenter (I-man).

i.get.it is available anytime, anywhere with 24 x 7 access. With the i.get.it learning process, companies can analyze indivdual and group performance through skills gap analysis, custom learning paths, assessment-based learning programs, and ongoing custom requirements.

i.get.it is leveraged by organizations in many different ways. Use i.get.it for your company's instructor-led training programs. Analyze knowledge gaps through the i.get. gap assessment tool, or even during the interviewing process to test a potential candidate's skills. Leverage more than 4,000 hours of instructional material for reference.

Product Offerings

With i.get.it's flexibility, your company can decide how much, or how little, of the LMS they need. There are three main programs in i.get.it: Authoring, eLearning and Publishing.

i.get.it Authoring
The i.get.it Authoring tool allows users to easily create their own classes within the eLearning system. It provides templates for the creator to use, so that each class will have the same, consistent look and feel for learners. The Authoring tool provides a single source for content, regardless of publishing form.

i.get.it eLearning
i.get.it eLearning uses Cadpo's unique and effective courseware to provide a user-friendly, well-organized learning program. Cadpo's experience in applying MCAD/PDM software tools to real-world design and manufacturing provides the basis for extremely high-quality content in i.get.it.

i.get.it Publishing
The i.get.it Publishing tool allows you to provide immersive learning options to your employees. Publishing options include paper output, Internet, presentation style, interactive instructor, video and others.

"We dropped Cast over two years ago to go with i.get.it and have never looked back..."
Paul Phillips
Manager-Manufacturing
Kennametal Hertel Ltd.

"We use i.get.it because it allows our contractors and new employees to learn at their own pace..."
Bill West
EDM Specialist
Eclipse Aviation

Benefits

- Analyze knowledge gaps within a department and develop a skills-improvement program.
- Measure cost and time savings using return on investment (ROI) based learning tools.
- Customize a learning path based on individual- or company-specific needs.
- Reference more than 18,000 documents of learning material in one easy search.
